                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4135853786
                                                                                                                                                                                                                                                                                                                           /note="Wector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3; were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is ~1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email:

Third-stage larvae, L3, were isolated from infected black files in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNAse H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Library was constructed by Sara Lustigman and Michelle

Third-stage larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of O. volvulus molt to fourth-stage larvae by day 5 in culture mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 1026 independent recombinants and the average insert size is ~1200 bp. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          genome@smith.edu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Lizotte-Waniewski in the Laboratory of Dr. S. Xho I; Filarial nematode parasite of humans. Third-stage
larvae, L3, were isolated from infected black files in
Cameroon (forest strain). The L3 were cultured in 20% ECS
in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in
culture. L3 of 0. volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from approximately
6000 molting larvae (mL3), 2000 larvae from day 1, 2 or 3
in culture, and converted to double-stranded cDNA using

The library was constructed in the lambda Uni-Zap XR vector and has I x 1026 independent recombinants and the average insert size is ~1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams The Library is available from Dr. Sara Lustigman (email: slustigmenybc.org)."

(5' end); Site_2: Xho I (3' end); Brugia malayi is a
lymphatic filarial nematode parasite of humans. mRNA was
prepared from third stage larvae of Brugia malayi
isolated from the peritoneal cavity of jirds nine days
after infection. The mRNA was converted to double
stranded cDNA using reverse transcriptase and oligo (dT)
followed by Rnase H and DNApol I. The library was
constructed by Michelle Lizotte-Waniewski. The library is
available from the Filarial Genome Project Resource

Larvae, L3, were isolated from infected black flies in
Cameroon (forest strain). The L3 were cultured in 20% FCS
in IMDN+ NCTC 135 and collected after day 1, 2, or 3 in
culture. L3 of 0. volvulus molt to fourth-stage larvae by
day 5 in culture. mRNA was isolated from day 1, 2 or 3
in culture, and converted to double-stranded cDNA using
reverse transcriptase and oligo(dT) followed by RNAse H
and DNA pol I. The library was constructed in the lambda
Uni-Zap XR vector and has 1 x 10E6 independent
recombinants and the average insert size is ~1200 bp. The
library was constructed by Sara Lustigman and Michelle
Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams.

The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Xho I; Filarial nematode parasite of humans. larvae, L3, were isolated from infected blac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17.3%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    larvae, L3, were isolated from infected black flies in Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately d000 molting larvae (mL3),2000 larvae from day 1, 2 or 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in culture, and converted to double-stranded CDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 b. The library was constructed by Sara Lustiman and Michelle library was constructed by Sara Lustiman and Michelle Lizotte-Wanlewski in the Laboratory of Dr. S. A. Williams.

The library was constructed in the lambda Uni-zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="Vector: Lambda Uni-ZAP XR; Site_1: Eco RI; Site_2: Xho I; Filarial nematode parasite of humans. Third-stage larvae, L3, were isolated from infected black flies in cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture mRNA was isolated from approximately constitution of the culture manual man
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /dev_stage="molting L3"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cameroon (forest strain). The L3 were cultured in 20% FCS in IMDM+ NCTC 135 and collected after day 1, 2, or 3 in culture. L3 of 0. volvulus molt to fourth-stage larvae by day 5 in culture. mRNA was isolated from approximately 6000 molting larvae (mL3),2000 larvae from day 1, 2 or 3 in culture, and converted to double-stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol 1. The library was constructed in the lambda UN1-Zap XR vector and has 1 x 10E6 independent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /strain="Kumba, Cameroons"

                                                                                                                                                      /note="vector: lambdaZapII (UniZap XR); Site_1: Eco R I (5' end); Site_2: Xho I (3' end); Brugia malayi is a lymphatic filarial nematode parasite of humans. mRNA was prepared from third stage larvae of Brugia malayi isolated from the peritoneal cavity of jirds six days after infection. The mRNA was converted to double stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNApol I. The library had 2 x 10E5 independent recombinants and average insert size was 900 base pairs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone_lib="Brugia malayi day

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in culture, and converted to double stranded cDNA using reverse transcriptase and oligo(dT) followed by RNase H and DNA pol I. The library was constructed in the lambda Uni-Zap XR vector and has 1 x 10E6 independent recombinants and the average insert size is -1200 bp. The library was constructed by Sara Lustigman and Michelle Lizotte-Waniewski in the Laboratory of Dr. S. A. Williams. The library is available from Dr. Sara Lustigman (email:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    slustigm@nybc.org)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel DNA encoding peptidyl hydroxy:glycine N-C lyase (PHL) - used to prepare PHL which can be used in the amidation of peptide(s) e.g. human calcitonin.

Claim 4; Page 18; 28pp; English.

The sequence was deduced from a CDNA insert from pAE-III-202-4 (PERM BP-3172). The vector serves as source for a DNA fragment encoding PHL for the construction of an expression vector for the prepn. of recombinant PHL. The protein may be truncated to comprise only residues 383-706 or 383-713. The PHL catalyses the reaction: R-GlyOH -> R-NH2. It can be used to produce peptides with amidated C-termini, e.g. calcitonin, growth hormone, LH-RH. Sequence 935 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AE-III (peptidylhydroxyglycine N-C lyase precursor).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence encodes a derivative of the mature C-terminal alpha-amidating enzyme from plasmid pXX799.

The plasmid was screened from an E.coli library using plasmid pXA457 to screen a larger library.

Although pXX799 is similar to pXA457 at the N-terminus, it has an are hydrophobic elements suggesting a membrane function.

Disclosure; 7pp; English.

Plasmid pXA799 contains a sequence derived from Xenopus laevis.

The plasmid was screened from an E.coli library using plasmid pXA457 to screen a larger library.

Although the gene product is similar to that of pXA457 at the N-terminus, lithas an area of hydrophobic elements suggesting a membrane function.

Disclosure; Page 10-15; 19pp; English.
3mu-1S cells (i.e. CHO cells expressing a peptidyl C-terminal alpha-amidase enzyme (AE)) were suspended in F-12 medium to which aliquots of trichostatin were added. Cells were cultured for 3 days at 37 deg and then assayed for AE. Without trichostatin, AE productivity was 708 U/ml. At 10, 50, 100 and 200 nM trichostatin, AE productivities were respectively 866, 1897, 1894 and 3359 U/ml.

This sequence represents the feline infectious peritonitis 1 virus (FIPV-I) spike protein. The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host cell with the spike protein DNA and expressing the sequence such sequence 1464 AA;

The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wzx (flippase) and wzy (polymerase) genes, within 0 antigen gene clusters improves the specificity of methods for the detection and identification of 0 antigens, e.g. in testing food- or faecal-derived samples, or samples from patients. The 0 antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            faeces or patient samples
Disclosure; Fig 7; 165pp; English.
This is the amino acid sequence of the protein encoded by the wbdM
gene of a gene cluster (see x06748) involved in the biosynthesis of
the Escherichia coli 0111 0 antigen. The protein shows high
the Escherichia coli 0111 0 antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (UNSY ) UNIV SYDNE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; pp; English.

CDNA libraries were prepared from human thyroid gland poly(A) RNA in lambda gtll and gtl0. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtl0 library, including gtl0chT2. Restriction analysis indicated that gtl0chT2 encoded a different type of enzyme to one of the other two clones. The DNA can be inserted into vectors for expression in E.coli or (more efficient)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               488

Disclosure: pp; English.

CDNA libraries were prepared from human thyroid gland poly(A) RNA cDNA libraries were prepared from the grobes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gt10 library, including gt100chT01.

Restriction analysis indicated that gt10chT101 encodes a different type of enzyme to one of the other two clones. The DNA can be increased into vectors for expression in E.coli or (more efficiently)

CDNA libraries were prepared from human thyroid gland poly(A) RNA cDNA libraries were prepared from human thyroid gland poly(A) RNA cDNA gril and gtl0. These were screened using probes derived from DNA encoding similar enzymes in Xenopus laevis. Three clones were isolated from the gtl0 library, including gtl0chT201.

Restriction analysis indicated that gtl0chT201 encodes a different type of enzyme to the other two clones. The DNA can be inserted
